Target IP: 10.10.11.87

- 1 Start the Pwnbox or use OpenVPN file to connect the HTB VPN server to your own home lab.
- 2 Use the ping command to confirm target machine is online.

```
kal@kali:~$ ping 10.10.11.87

With the username from the file and the cracked password, I tried logging into the SSH server. A simple **ls** command to list the files and read the **user.txt** for the user flag.
